1 Executive Summary

The ELECTROLIFE data management plan (DMP) describes the data management lifecycle for all datasets being collected, processed, or generated through the project. It describes the policy for handling all the datasets generated within the project, how research data will be generated, collected, and handled during the project and after it is completed, describing what data will be collected/generated and what methodology and standards will be followed.

In a Data Management Plan (DMP), the definition of "data" encompasses all the types of data that will be collected, generated, processed, and analyzed during the course of a research project. Data are the instruments used to achieve research results.
